

Enable Integrated Windows Authentication (IWA) in Mozilla Firefox

Introduction

This document explains how to configure Integrated Windows Authentication (IWA) in Mozilla Firefox.

Configuration Steps

 The IWA / desktop SSO behavior can be achieved in Firefox with a one-time configuration change in the user computer's Firefox browser.

1. Start Firefox
2. In the address bar, type **about:config**. At the prompt that warns to proceed with caution, agree to continue.
3. After the config page loads, in the filter box type: **network.automatic**. You should see a search result of **network.automatic-ntlm-auth.trusted-uris**
 - a. Modify **network.automatic-ntlm-auth.trusted-uris** by double-clicking the row, and then enter https://your_SecureAuth_FQDN.com
 - b. Multiple sites can be added by comma delimiting them, as in this example: https://your_SecureAuth_FQDN.com, <https://www.replacewithyourintranetsite.com>
4. Click "OK" and close Firefox
