

SecureAuth Backup Tool Event Log IDs

Introduction

This document describes the Event IDs generated by the SecureAuth Backup Tool

Applies to

SecureAuth IdP

Discussion

Where are the event logs located?

This tool writes to the Windows Application Event Log with a source of **SecureAuth Backup Tool**

Event ID Descriptions

ID	Level	Description
100	Information	A backup operation was initiated.
101	Information	A restore operation was initiated.
102	Information	A restore operation was completed successfully.
103	Information	A backup operation was completed successfully.
104	Information	An IIS application was created for a SecureAuth realm during a restore operation.
105	Information	A certificate was installed during a restore operation.
106	Information	User declined the legal agreement.
107	Information	User cancelled the restore operation.
108	Information	The Authenticated Users privilege was added to NetFrameworkConfigurationKey.
109	Information	A privilege was added to the private key of a certificate during a restore operation.
110	Information	The IIS URL Rewrite module has been successfully installed on this SecureAuth IdP Appliance
111	Information	A backup of the IIS configuration was made with the name <backup name>.
112	Information	The IIS Application <app name> has been renamed to <new app name>.
113	Information	The archive being restored has web.config files which are configured to use the SHA-1 cloud environment. While this SecureAuth IdP Appliance is currently configured to use SHA-2. Make sure to update the URLs in the System Info tab otherwise the appliance will be unable to access cloud services.
200	Error	A corrupt web.config file was found.
201	Warning	The user failed to provide a strong password to protect the archive.
202	Warning	An incorrect file number was entered when selecting an archive to restore from backup.
203	Warning	User failed to provide a password when restoring an archive.

204	Warning	An error occurred while trying to decrypt the web.config files of an archive during a restore operation.
205	Error	The directory D:\SecureAuth\SecureAuth0 is not present on this SecureAuth IdP Appliance. The SecureAuth0 directory contains files necessary for the restore process. The restore has been aborted.
206	Error	An archive selected for restore was determined to be corrupt and is no longer usable. Try restoring from another backup.
207	Warning	There is insufficient space to perform a full backup. Try freeing up space on the applicable volume.
208	Warning	A certificate was not able to be archived due to the private key being marked as non-exportable.
209	Warning	A certificate failed to install during a restore operation.
210	Warning	The specified archive directory in sabackupconfig.ini does not exist and can't be used. The entry should be updated to a directory which exists.
211	Warning	The specified temp directory in sabackupconfig.ini does not exist and can't be used. The entry should be updated to a directory which exists.
212	Error	The SecureAuth version you are trying to restore from is newer than the version on this appliance. Newer web.config files will not work with older versions of the product.
213	Error	During restore one or more files in the archive did not validate properly against the SHA-256 hash. Try restoring from another backup.
214	Warning	The SecureAuth version you are trying to restore from is not compatible with the license file on this appliance.
215	Warning	An error occurred while granting read privileges to the private key of a certificate during restore.
216	Warning	An error occurred while trying to apply the Authenticated Users privilege to NetFrameworkConfigurationKey.
217	Error	An error occurred while generating the manifest.
218	Error	The IIS URL Rewrite module failed to install and is required for this installation. Please visit http://www.iis.net/downloads/microsoft/url-rewrite and install the software manually.
219	Warning	Unable to update the SecureAuth0Pool configuration. Please run the RefreshSecureAuth0 script located at D:\MFCApp_Bin\Extras\RefreshSecureAuth0.bat to complete the restore process.
220	Error	(Deprecated in v2.4.0) The SecureAuth Backup Tool requires .Net 4.5 or greater to run. .Net Framework 4.5 was not detected on this SecureAuth IdP Appliance.
221	Error	The SecureAuth Backup Tool does not support Microsoft Windows Server 2003.
222	Error	The SecureAuth Backup tool has not been run from the correct location (D:\MFCApp_Bin\Extras). Review the documentation for this tool and then try running it again. The documentation can be found at https://docs.secureauth.com/x/VICIAQ
223	Warning	The password provided to restore the archive was incorrect.
224	Error	One or more web.config files have not been decrypted. These files must be decrypted before the install can proceed. Use the SecureAuth administrative interface to decrypt the web.config files and then run this tool again.
225	Error	A supported version of the .Net Framework was not found on this SecureAuth IdP Appliance.
