

Certificate Enrollment Workflow Configuration

Introduction

Use this guide as a reference to configure a SecureAuth IdP realm that utilizes X.509 certificate enrollment.

This is commonly used for VPN integrations that require certificates for Multi-Factor Authentication access.

SecureAuth IdP Configuration Steps

Depending on how end-users will access the VPN, specific workflows can be configured on top of these configuration steps

Refer to [Standard Multi-Factor Authentication Workflow Configuration, Username Only or Username and Password Only Workflow Configuration, \(Valid Persistent Token\) | Second Factor Workflow Configuration](#), or [\(Valid Persistent Token\) | Password or \(Valid Persistent Token\) only Workflow Configuration](#) for more specific workflow options
