

Risk check factors

The following layered adaptive authentication risk check factors are available in SecureAuth IdP:

Factor	Description	Requires Prevent package license
IP Address / Country restriction	Restrict access by IP address(es) or country code(s).	✓
SecureAuth Threat Service	Restrict access based on risk factors and threat intelligence by IP Address evaluation.	✓
User Risk	Restrict access based on user reputation and / or user behavior factors.	✓
User / Group restriction	Restrict access by end user(s) or user group(s)	✗
Geo-velocity restriction	Restrict access based on the current time and location of end user compared to time and location of end user's last access.	✗

To upgrade SecureAuth IdP to the Prevent package license, contact [SecureAuth Support](#).
